

Dynamic-EMS Invests as New Business Increases

Dynamic-EMS, the Fife based electronic manufacturing services company, has invested in excess of £140K in new equipment for its Dalgety Bay manufacturing facility.

[UKPRwire, Mon Oct 20 2008] Dynamic-EMS, the Fife based electronic manufacturing services company, has invested in excess of £140K in new equipment for its Dalgety Bay manufacturing facility. The investment is part of a planned programme to improve and expand the services it provides to its customers.

Tony Higgins, managing director, commented, "This investment in new equipment and software for our production facility will enable us to further improve our efficiency, meet the increase in demand for RoHS compliant product and ensure we continue to meet our customer's expectations for quality and service."

The investment includes a new BTU Pyramax SMT reflow oven, which will increase Dynamic-EMS RoHS manufacturing capacity by 50% and a Horizon 03i SMT screen printer. The screen printer from DEK is a replacement for an existing machine, and provides improved print accuracy, flexibility and reliability.

To enable the company to more accurately monitor material pricing, excess material costs and improve the accuracy and turnaround of quotations Dynamic-EMS has invested in QuoteWin[®] software and hosting services. QuoteWin provides intelligent quote management to streamline quote activities and data resulting in more competitive material costs and reduced quote cycle times. Additionally, a new Kardex vertical storage system has been installed following new customer activity. The vertical storage option has allowed better utilisation of floor space and improved efficiency in kitting operations.

About Dynamic EMS

Dynamic-EMS is located in a 43,000 sq ft facility in Dunfermline, Scotland, with 83 staff and a turnover of £8M. Dynamic EMS enjoys a reputation for product quality, on-time delivery and competitive pricing in the supply of SMT and PTH circuit board assemblies and product box build.

Served markets include the Medical, Communications, Automotive, Security, Telemetry, Telematics and Instrumentation business sectors with services tailored to meet customers' specific requirements. To enable customers to effectively manage their assets, Dynamic-EMS can ship from stock, provide consignment stock (pay for on use) distribute the product worldwide or sell under standard trading conditions.
