

PolyDyne Software Inc. launches the ConnectWin™ Portal

Austin, Texas—March 30, 2009— PolyDyne Software Inc.® today announced that it has launched the ConnectWin Portal. ConnectWin provides a forum where supply chain professionals in the electronics manufacturing industry can connect with each other and access business-critical content and services.

“As we enter a new era dominated by social networking, ConnectWin will leverage the latest technology advancements to simplify many-to-many connections between people in the industry”, said Linda Elkins, Vice President of Marketing. ConnectWin will provide a connecting place for the more than 50,000 people currently using PolyDyne’s software solutions as well as others in the industry. Valuable content and services will be made available through the portal.

The first of these services, a BOM Management service, is also being announced today. Using the BOM Management service, users can upload a Bill of Materials to have the part data cleaned, parts cross referenced and RoHS and Lifecycle data appended. The BOM Management service makes it fast and cost-effective to clean and augment the data in bills of materials.

The list of content and services available on ConnectWin will be expanding quickly. PolyDyne is currently working with early adopters to perfect some of the soon-to-be released services. A self-service BOM Management application is expected to be released within 30 to 60 days. This BOM Management application will enable users to clean and augment BOM data with the click of a button.

The release of ConnectWin builds on PolyDyne’s 15 year history of delivering innovative technology solutions to the electronics manufacturing supply chain. Since its inception, PolyDyne’s technology has facilitated commerce and communications between OEMs, contract manufacturers and component suppliers. It pioneered strategic sourcing and electronic transaction processing for the supply chain in the mid-90s. Later, PolyDyne’s SupplyWin application enabled one-to-many connections between supply chain partners around the globe.

“We’ve always been a company that has delivered consultative expertise in outsourcing and supply chain strategies through our products and people to help many of the biggest companies in the industry achieve their goals. The release of ConnectWin marks the beginning of a new way in which we will deliver additional value to our customers”, said David Tabb, CEO of PolyDyne.

Users can register on ConnectWin (www.connectwin.com) now to gain access to the BOM Service and to receive notification of new services as they become available. Registered users will have the opportunity to receive a free BOM cleaning service.

About PolyDyne

PolyDyne Software Inc. develops and markets strategic sourcing software applications. PolyDyne’s products enable companies to gain control over and insight into their direct material spend, supplier management, sourcing and quote management processes.
